EDUCATION

Rio Hondo College

Associate of Science Social Science

Whittier, CA

Aug. 2017 – May 2021

Rio Hondo College

Associate of Science Science and Mathematics

Whittier, CA

Aug. 2017 – Dec 2021

California State University Fullerton

Bachelor's Degree in Computer Science

Fullerton, CA

(In progress) Aug. 2022 – Dec 2024

EXPERIENCE

Independent Game Developer

Personal Project

May 2024 – Present

Remote

- Designing and developing a game using Unity engine and C
- Implementing core gameplay mechanics, UI systems, and optimization techniques
- Managing full development lifecycle from concept to implementation

Computer Science Student Researcher

California State University Fullerton

Aug 2022 – Present

Fullerton, CA

- Collaborated on COVID-19 mortality prediction project using R and statistical modeling
- Developed data analysis pipelines using tidyverse and modelr libraries
- Created visualizations and reports to communicate findings effectively

PROJECTS

Peggle-Style Unity Game | C#, Unity, git

May 2024 – Present

- Developed a Unity-based game inspired by Peggle featuring complex physics-based gameplay mechanics
- Implemented a comprehensive power-up system with passive, active, and super abilities using object-oriented principles
- Created robust UI system with tooltips, progress bars, and dynamic score tracking
- Designed modular game architecture incorporating managers for audio, game state, and scene control

MOFIT (Motion Oriented Fitness Improvement Tracker) | C, Unity, OpenCV, AWS Jan. 2024 – Dec 2024

- Developed an AI-powered fitness application using Unity and YOLOv8 for real-time pose estimation and form analysis
- Implemented machine learning models to track and analyze user movements during exercises, providing instant feedback on form
- Designed AWS-integrated backend architecture using DynamoDB and Cognito for secure user authentication and data storage
- Created comprehensive test suite with unit, performance, and security tests achieving 95% code coverage

COVID-19 Mortality Predictor | R, tidyverse, modelr

Jan 2024 – May 2024

- Developed linear regression models to predict COVID-19 mortality rates across different countries
- Processed and analyzed large-scale COVID-19 datasets using R, incorporating demographic and healthcare factors
- Created data visualizations to identify correlations between mortality rates and various predictors
- Evaluated model performance using statistical metrics (RMSE, R-squared) across different variable combinations

TECHNICAL SKILLS

Languages: C, Python, C/C++, JavaScript, HTML/CSS, R

Frameworks & Libraries: Unity, OpenCV, YOLOv8, React, Flask

Cloud & DevOps: AWS (Cognito, DynamoDB, Lambda), Google Cloud Platform

Developer Tools: Git, VS Code, Visual Studio, Unity, Android Studio, R Studio

Machine Learning: Computer Vision, Pose Estimation, Real-time Object Detection

Testing: Unit Testing, Performance Testing, Security Testing
